Alishba Shafiq

AI / Machine Learning Developer

Islamabad, Pakistan | kalishbakhan456@gmail.com | linkedin.com/in/alishbashafiq332 | github.com/Alishba-12

SUMMARY

Software Engineering graduate (BS, CGPA 3.5/4.0) and a fresher looking for a first role in AI and machine learning. I have built projects in clustering, computer vision, text classification and retrieval-augmented generation (RAG), and I completed five Forage job simulations covering GenAI, backend work and testing. I also build full stack apps and write automated tests, so I can help on the engineering side of a project as well.

TECHNICAL SKILLS

AI and ML: Python, scikit-learn, PyTorch, K-Means clustering, transfer learning, model evaluation (accuracy, precision, recall, F1, confusion matrix), RAG, rule-based NLP, chatbot design, prompt engineering, LangChain, ChromaDB, Groq

Data: pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit, Google Colab, Jupyter

Full stack: React, Redux, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Java, Spring Boot, C# and .NET, Node.js, REST APIs, Flutter and Dart

Databases and tools: MySQL, SQL, MongoDB, Docker, Git, GitHub, IntelliJ IDEA, VS Code

Testing: Cypress, xUnit, Postman, manual and exploratory testing, test case design, bug reporting

MACHINE LEARNING PROJECTS

RAG 10-K FinBot

2026

Python, LangChain, ChromaDB, Streamlit, Groq (openai/gpt-oss-120b) | github.com/Alishba-12/finbot-10k-analyst

- Built a chatbot that answers plain-English questions about SEC 10-K filings.
- Pulls the filings from SEC EDGAR, stores them in ChromaDB and retrieves the passages that match a question. The language model on Groq writes the answer from those passages.

K-Means Customer Segmentation

2026

Python, scikit-learn, pandas, NumPy, Matplotlib, Seaborn, Plotly | github.com/Alishba-12/K-Means_Customer_Segmentation

- Grouped 200 mall customers into 5 segments using age, annual income and spending score. Chose the number of clusters with the elbow method and the silhouette score.
- Wrote a short business profile for each segment, for example high-value premium customers and budget shoppers.

Spam SMS and Email Classifier

2026

Python, scikit-learn, NLTK, pandas, Google Colab | github.com/Alishba-12/AI-ML_02_SpamSMSClassifier_byte

- Logistic Regression reached 98.2% accuracy on the UCI SMS Spam Collection, with a spam F1-score of 0.97 and an AUC-ROC of 0.99.
- Evaluated with precision, recall and a confusion matrix, and saved the trained model for reuse.

Cats vs Dogs Image Classifier

2026

PyTorch, ResNet18, Google Colab

- Fine-tuned a pretrained ResNet18 with transfer learning to tell cats from dogs. Trained and tested it in Google Colab.

FULL STACK AND MOBILE PROJECTS

Foodpanda Clone

Java Spring Boot, MySQL, React, Docker, Cypress

- Food delivery web app where customers browse restaurant menus, place orders and track them. Wrote Cypress end-to-end tests for search, cart, checkout and order tracking.

Tutor Connect

Java Spring Boot, MySQL, React, Docker, Cypress

- Platform where students search and compare tutors by subject and book sessions with flexible timings. Cypress tests cover sign-up, tutor search and booking.

Online Shopping Website

PHP, HTML, CSS

- Shopping website for tech products with browsing, a cart, checkout and a payment option.

Library Management System
C#, SQL

- Manages books and members and handles issuing and returning books. The librarian is the admin, who adds students and sends them an in-app message when a book is due back.

Personalized Medication Assistance App
Flutter, Dart

- Mobile app with reminders for medicine timings and check-up dates, a medicine list and the nearest pharmacy.

Notepad Clone
Flutter, Dart

- Notes app that saves, edits and deletes notes, with tasks and a notification when a task is due.

JOB SIMULATIONS (FORAGE, SELF-PACED AND UNPAID)

GenAI Job Simulation, BCG X
27 Feb 2026

Certificate of completion

- Extracted key metrics from SEC 10-K and 10-Q filings with Python and pandas.
- Built a rule-based financial chatbot that understands a question and returns structured financial facts.

Software Engineering Job Simulation, Wells Fargo
26 Feb 2026

Certificate of completion

- Analysed the requirements of a financial portfolio management system and drew its entity relationship diagram in IntelliJ, published on GitHub.

Software Engineering Job Simulation, Skyscanner
26 Mar 2026

Certificate of completion

- Built a Dropwizard microservice for car rental and hotel search and extended an Android flight itinerary app with the Backpack UI components.

Advanced Software Engineering Job Simulation, Walmart Global Tech
31 Mar 2026

Certificate of completion

- Wrote a custom heap in Java to prioritise shipments and designed a normalised relational database schema.

Software Engineering Job Simulation, Commonwealth Bank
31 Mar 2026

Certificate of completion

- On the CommBank Goal Tracker app, extended a C# .NET backend with MongoDB and a React, Redux and TypeScript frontend. Checked endpoints with Postman, wrote xUnit tests and submitted a pull request.

EDUCATION

B.Sc. Software Engineering, University of Poonch Rawalakot
Oct 2020 - Jul 2025

CGPA 3.5 / 4.0

Intermediate (F.Sc. Pre-Engineering), Read Foundation
Aug 2018 - May 2020

Mathematics, Chemistry, Physics. 84%

Matriculation (Science), NEES
Mar 2016 - Jun 2018

Biology, Mathematics, Physics, Chemistry. 88%
